

Virtual SOC Attack-Defense Lab

Lab Overview

This report documents the simulation of a security operations center (SOC) environment using a VirtualBox-based home lab. The purpose is to gain hands-on experience with attack detection, log collection, and monitoring using tools like Kali Linux, Ubuntu Server, and Splunk.

Lab Components

Role	System	Description
Attacker	Kali Linux	Used to simulate brute-force SSH attacks
Victim	Ubuntu Server	SSH server target for attacks, log generator
Analyst	Splunk on Ubuntu	Used for collecting and analyzing logs

Setup Summary

1. Networking:

- All VMs configured to use NAT network (custom set).
- IP addresses:
 - Ubuntu (server): 192.168.X.X
 - Kali (attacker): 192.168.X.X
- Confirmed communication via ping.

2. Ubuntu Server Configuration:

- Installed OpenSSH:
 - `sudo apt update`
 - `sudo apt install openssh-server`
 - `sudo systemctl enable --now ssh`
- Verified SSH service is active.

→ Configured rsyslog to forward logs:

- *. * @127.0.0.1:514

3. Splunk Configuration:

- Installed Splunk on Ubuntu
- Port: 8000 (GUI), 514 (UDP)
- Created a new data input for syslog
- Set up Splunk to listen for logs from rsyslog.

Attack Simulation

→ **Tool Used:** Hydra

- Command:

hydra -L user.txt -P pass.txt ssh://IP Address -t 4

hydra

Hydra is a powerful tool for cracking login credentials across various network services.

-L user.txt

This flag tells Hydra to use a list of usernames from the user.txt file.

-P pass.txt

This flag tells Hydra to use a list of passwords from the pass.txt file.

ssh://IP Address

This specifies the target as an SSH service located at a given IP address.

-t 4

This sets 4 concurrent tasks for Hydra to try combinations simultaneously, speeding up the attack.

Objective: Simulate brute-force SSH login attempts from Kali to Ubuntu.

Outcome: Ubuntu logs recorded multiple failed login attempts and forwarded them to Splunk.

Detection in Splunk

1. Failed Logins:

index=* sourcetype=syslog "Failed password"

i	Time	Event
>	6/15/25 5:28:04.000 AM	Jun 15 05:28:04 127.0.0.1 Jun 15 05:28:04 Ubuntu sshd-session[6017]: Failed password for root from 192.168.1.7 port 58724 ssh2 host = 127.0.0.1 source = udp:514 sourcetype = syslog
>	6/15/25 5:28:04.000 AM	Jun 15 05:28:04 127.0.0.1 Jun 15 05:28:04 Ubuntu sshd-session[6014]: Failed password for root from 192.168.1.7 port 58690 ssh2 host = 127.0.0.1 source = udp:514 sourcetype = syslog
>	6/15/25 5:28:04.000 AM	Jun 15 05:28:04 127.0.0.1 Jun 15 05:28:04 Ubuntu sshd-session[6015]: Failed password for root from 192.168.1.7 port 58692 ssh2 host = 127.0.0.1 source = udp:514 sourcetype = syslog
>	6/15/25 5:28:04.000 AM	Jun 15 05:28:04 127.0.0.1 Jun 15 05:28:04 Ubuntu sshd-session[6016]: Failed password for root from 192.168.1.7 port 58708 ssh2 host = 127.0.0.1 source = udp:514 sourcetype = syslog

2. Successful Logins:

index=* sourcetype=syslog "Accepted password"

New Search

index=* sourcetype=syslog "Accepted password"

✓ 0 events (before 6/15/25 7:22:23.000 AM) No Event Sampling

Events (0) Patterns Statistics Visualization

No results found.

No results because there were no successful passwords in the brute force

3. Top Brute-force Sources:

index=* sourcetype=syslog "Failed password"

| rex "from (?<ip>\d+\.\d+\.\d+\.\d+)"

| stats count by ip

New Search

index=* sourcetype=syslog "Failed password"
| rex "from (?<ip>\d+\.\d+\.\d+\.\d+)"
| stats count by ip

✓ 4 events (before 6/15/25 7:23:05.000 AM) No Event Sampling

Events Patterns Statistics (1) Visualization

_time 2025-06-15 05:00 count 4

Lessons Learned

- Understood basic log flow from system to SIEM (Splunk)
- Simulated a real-world brute-force scenario
- Practiced detecting suspicious activity via Splunk queries
- Learned to forward logs using rsyslog and UDP ports

Conclusion

This simulation was a foundational SOC analyst exercise, proving skills in log collection, attack simulation, detection, and analysis. Future iterations will include:

- Adding a Windows 10 VM as a victim with Windows Event Forwarding (WEF)
- Testing detection of malware behavior and privilege escalation.
